*Antigens, Proteins, Biochemistry, *Crystalline lens.

A study of the process of antigen formation in the de-
veloping crystalline lens of the chick showed that estab-
lishment of its antigen structure is complete after
seven days of incubation. During this period of develop-
ment all the seven antigens characteristic of the de-
finitive lens are formed. A very small amount of anti-
gen of the definitive lens was found in the lens placode
of the embryos in the 23-25 somite stage of develop-
(Biological Sciences--Physiology, TT, v. 8, no. 4) (over)
